PREFACE

The compilation of this bibliography was born from the frustration in locating relevant references in the organization and teaching of a graduate course in psycholinguistics during the 1967-68 academic year. To alleviate this lack of collected references, we have attempted in this document to provide a representative, un-dogmatic, and fairly thorough coverage of selected areas of the psycholinguistic literature which are not adequately covered in existing bibliographies. Because of our view that psycholinguistics consists of the study of the acquisition, production and understanding of a natural language, we have deliberately excluded from consideration any literature in areas such as language and culture, phonetic symbolism, paired association testing, concept formation, anthropological linguistics, and speech pathology. This is not to deny the importance of any of these but to indicate that they appear to us to lie well on the periphery of the field of psycholinguistics. We have, however, included short sections on animal communication and language disorder, mostly because the material was interesting to us. Since there are a number of good and reasonably current bibliographies in the area of syntax and phonology, we have omitted these references and have cited the reviews in Sec. I. Moreover, a forthcoming very complete and up-to-date bibliography by Daniel I. Slobin on child language acquisition has permitted us to leave this area less complete than we ordinarily would have done. Each citation occurs only once in this bibliography, and in each case we have attempted to place it in the most obvious section even though two or more sections might be applicable.

At the top of each page appears an abbreviated section title (e.g., Anthologies, Bibliographies, Surveys; Psychology, Psycholinguistics;

Bolt Beranek and Newman Inc

Speech Analysis; Semantics; etc.). We believe that this referencing system will facilitate access to the subject bibliographies.

We would like to acknowledge the kind assistance given us by Kenneth N. Stevens and Merrill Garrett in editing earlier versions of this bibliography. The final decision for inclusion rests solely with the authors.

TABLE OF CONTENTS

| | page |
|---|------|
| Preface | iii |
| Section I: Anthologies, Bibliographies, and Surveys of the Literature | 1 |
| II: Philosophy of Language, General Language, and Linguistics | 3 |
| III: Psychology and Psycholinguistics | 14 |
| IV: Speech Analysis from the Articulatory and Acoustic Viewpoint | 17 |
| V: Speech Perception by Human | 28 |
| VI: Automatic Speech Recognition | 40 |
| VII: Speech Synthesis | 44 |
| VIII: Semantics | 48 |
| IX: Psychological Reality of Linguistic Models | 54 |
| X: Automatic Syntactic Analysis | 60 |
| XI: Language Acquisition | 64 |
| XII: Animal Communication | 70 |
| XIII: Language Disorders | 72 |

| 13. ABSTRACT This document provides a representative, undogmatic, and fairly thorough coverage of selected areas of the psycholinguistic literature which are not adequately covered in existing bibliographies. Because of our view that psycholinguistics consists of the study of the acquisition, production and understanding of a natural language, we have deliberately excluded from consideration any literature in areas such as language and culture, phonetic symbolism, paired association testing, concept formation, anthropological linguistics, and speech pathology. Since there are a number of good and reasonably current bibliographies in the area of syntax and phonology, we have omitted these references and have cited the reviews in Section I. Moreover, a forthcoming very complete and up-to-date bibliography by Daniel I. Slobin on child language acquisition has permitted us to leave this area less completed than we ordinarily would have done. Each citation occurs only once in this bibliography, and in each case we have attempted to place it in the most obvious section even though two or more sections might be applicable, e.g., Anthologies, Bibliographies, Surveys; Psychology, Psycholinguistics; Speech Analysis; Semantics. | | |
